

Public Warning

Hexavalent Chromium & Chromium 6, Cancer-Causing Toxin, is Common in our Tap Water based on Dr. Oz's television show dated 2/12/2011- "With levels this high, it's critically important that people begin to think about filtering their water," Houlihan said from the National Institutes of Health told CBS News . Unfortunately, inexpensive carbon filters like the ones in filtration pitchers and tap faucet filtration units aren't good at removing hexavalent chromium, she said, adding that reverse-osmosis filtration systems...were a much safer bet.

Reverse Osmosis 4 Stage w/3rd faucet 75 Gallons Per Day:

Suggested Retail: \$495.00

With Professional Installation of \$195.00

Lifetime Warranty with annual Filter Changes

Based on Tampabay water testing, Chromium has been found at .0006 PPM in your water. **Did you know the EPA nor Tampabay water require testing for Chromium 6 or Perchlorate in your tap water. Have you ever wondered why so many patients end up at the Oncology (cancer)doctors office?**

Chromium 6 is shown to cause kidney, liver, stomach & intestinal cancer.

The shocking results from Dr. Oz's special investigation are in. Arsenic, lead, known carcinogen chromium 6, and perchlorate – or rocket fuel – are among the contaminants you are being exposed to every day.

To view Dr Oz's (from Oprah Winfrey show) ABC show on February 12, 2011 please go to www.waterguardsb.com bottom of first column, click on "Whats in your drinking water" and view the 10 minute video dealing with Chromium 6 in your drinking water. In 35 tests (2 in FL, Pensacola and Jacksonville) 31 including both FL cities had chromium 6.

Do You Feel Safe drinking your water?

**WaterGuard
727-577-0441**

WaterGuard is offering our 4 stage 75 gallon per day Reverse Osmosis drinking water system. We test your water and change the filters each year with our lifetime warranty.

(CBS) Americans worried about the safety of their drinking water may have new cause for alarm.

What does Brockovich say now about hexavalent chromium?

"This chemical has been so widely used by so many industries across the U.S. that this doesn't surprise me," she told the Post. "Our municipal water supplies are in danger all over the U.S. This is a chemical that should be regulated."

A new study shows that tens of millions of us are drinking water contaminated with hexavalent chromium, a cancer-causing toxin that garnered national attention with the 2000 feature film "Erin Brockovich."

Brockovich helped residents of Hinkley, California sue Pacific Gas & Electric, alleging that the company leaked hexavalent chromium into the town's drinking water for more than 30 years, according to the Post. The company paid \$333 million in damages and pledged to clean up the contamination.

Bottled water is another option, but all the plastic bottles aren't very good for the environment, she said.

Recent tests found hexavalent chromium, a.k.a. chromium-6, in the drinking water of 31 of 35 [cities](#) tested, according to a [statement](#) issued by the Environmental Working Group, the Washington, D.C.-based advocacy group that conducted the tests. Among the cities with the highest levels were Norman, Okla., Honolulu, and Riverside, Calif.

The study, the first of its kind to be made public, comes at a time when the EPA is considering whether to implement a national standard for hexavalent chromium in drinking water, the Washington Post [reported](#). The compound was deemed a "probable carcinogen" by the National Institutes of Health in 2008. It's been linked to stomach cancer and leukemia, as well as other health conditions, Jane Houlihan, senior vice president of research for the group, told CBS News. It can also appear in tap water as a result of erosion of natural deposits.

Don't take our word, be sure to watch Dr. Oz's presentation on February 12, 2011 at www.waterguardsb.com first column, bottom of page click on "What's in your drinking water" first video. **ATT: EPA on 3/3/11 just ordered comments on testing for Chromium 6.**
